Is 1000 nits in Sure View just marketing hype?

My HP Spectre 15 OLED screen looks brighter at max brightness than the 1000 nits HP 840 G7, which is a SV Reflect Gen 4... I am seriously doubting it is useable on a sunny day outdoors

I've never seen one. I have read terrible things. How's your spectre holding up?

Sure View Gen 4 seems to be worse than Gen 3...OR I got a defective unit? It has a copper like film... I can't even see anything outside, and that's on a cloudy day!

why is not 1000 nits?

⊖ ↑ 1 ↓ Reply Share ...

Ottawa_points OP • 3y ago

It only reaches maybe 600 or 700 . It's definitely not enough for full on sunlight.
