

RLT
Academy

POLICY RECOMMENDATIONS

Launch Event

16 July 2024

Irish College Leuven's Grand Auditorium/Online

14:00 – 16:00, followed by a cocktail reception

Join us for a groundbreaking event as we mark the end of the first edition of the RLT Academy Project – by launching a set of policy recommendations to present to policymakers the current challenges and potential solutions for improving RLTs uptake by healthcare professionals and healthcare national systems.

Radioligand therapy (RLT) is an innovative type of nuclear medicine that targets markers on tumor cells or their microenvironment, with the goal of delivering the treatment mostly to the affected tumor cells, while limiting unwanted effects on healthy cells.

Bringing together established experts in the medical fields relevant to RLT, **the RLT Academy is launching a set of policy recommendations to advise policymakers on overcoming barriers to RLT adoption.**

Ensuring proper patient access to RLT in Europe requires addressing barriers such as healthcare infrastructure, regulatory contexts, and stakeholder cooperation from regional to European levels. These **policy recommendations** will build on **best practices** from the project and **outline concrete actions for policymakers to take.**

Please join us for this unique gathering to promote cutting-edge expertise in nuclear medicine and advanced Radioligand Therapy (RLT) for cancer care.
