Support letter

To Whom It May Concern

I hereby confirm the interest of the Estonian Military Academy in the project "Digital Solutions for Civil–Military Cooperation and Resilience: Insights from Ukraine (CIMRES)", submitted by the University of Tartu and the NGO Media Reforms Centre within the framework of the NATO Science for Peace and Security (SPS) Programme.

The proposed initiative addresses an issue of growing strategic importance for both Ukraine and NATO Allies, namely the role of digital technologies in strengthening civil–military cooperation, societal resilience, and crisis response capacities under conditions of armed conflict and hybrid threats. Ukraine's experience since the beginning of Russia's full-scale invasion provides a unique and highly relevant empirical basis for examining how digital solutions can support a whole-of-society response, total-defence approach, and broader cross-sector coordination.

Estonian Military Academy is particularly interested in accessing and engaging with the project's expected outputs, including academic publications, analytical and applied reports, and practical policy recommendations. I also welcome the opportunity to participate as an end-user in expert discussions and exchanges with the project team to gain deeper insights into Ukraine's experience and to explore the potential adaptation and implementation of relevant practices and digital tools within NATO member states and partner countries.

I believe the CIMRES project has significant potential to advance innovative approaches to resilience-building and civil–military cooperation.

Sincerely

Johan-Elias Seljamaa
Commodore
Commandant of Estonian Military Academy
