Laender Governments

## European Technical Assessment

## ETA-13/1038 of 13 January 2015

English translation prepared by DIBt - Original version in German language

### General Part

Technical Assessment Body issuing the  
European Technical Assessment:

Deutsches Institut für Bautechnik

Trade name of the construction product

Hilti screw anchor HUS3

Product family  
to which the construction product belongs

Concrete screw of sizes 8, 10 and 14 for use in concrete

Manufacturer

Hilti Aktiengesellschaft  
9494 SCHAAN  
FÜRSTENTUM LIECHTENSTEIN

Manufacturing plant

Hilti Werke

This European Technical Assessment  
contains

16 pages including 3 annexes

This European Technical Assessment is  
issued in accordance with Regulation (EU)  
No 305/2011, on the basis of

Guideline for European technical approval of "Metal  
anchors for use in concrete", ETAG 001 Part 3: "Undercut  
anchors", amended version April 2013, used as European  
Assessment Document (EAD) according to Article 66  
Paragraph 3 of Regulation (EU) No 305/2011 and  
EAD 330011-00-0601 "Adjustable concrete screws",  
July 2014

This version replaces

ETA-13/1038 issued on 19 September 2014

The European Technical Assessment is issued by the Technical Assessment Body in its official language. Translations of this European Technical Assessment in other languages shall fully correspond to the original issued document and shall be identified as such.

Communication of this European Technical Assessment, including transmission by electronic means, shall be in full. However, partial reproduction may only be made with the written consent of the issuing Technical Assessment Body. Any partial reproduction has to be identified as such.

This European Technical Assessment may be withdrawn by the issuing Technical Assessment Body, in particular pursuant to information by the Commission according to Article 25 Paragraph 3 of Regulation (EU) No 305/2011.

## Specific Part

### 1 Technical description of the product

The Hilti screw anchor HUS 3 is made of galvanised steel of sizes 8, 10 and 14. The anchor may be provided with hexagon head (HUS 3 H) or with countersunk head (HUS 3 C). The anchor is screwed into a predrilled cylindrical drill hole. The special thread of the anchor cuts an internal thread into the member while setting. The anchorage is characterised by mechanical interlock in the special thread.

An illustration of the product and intended use is given in A.

### 2 Specification of the intended use in accordance with the applicable EAD

The performances given in Section 3 are only valid if the anchor is used in compliance with the specifications and conditions given in Annex B.

The verifications and assessment methods on which this European Technical Assessment is based lead the assumption of working life of the anchor of 50 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

### 3 Performance of the product and references to the methods used for its assessment

#### 3.1 Mechanical resistance and stability (BWR 1)

Essential characteristic	Performance
Product performance for static and quasi static action	See Annex C 1
Product performance for seismic category C1	See Annex C 2
Displacements under tension and shear load	See Annex C 4

#### 3.2 Safety in case of fire (BWR 2)

Essential characteristic	Performance
Reaction to fire	Anchorage satisfy requirements for Class A1
Product performance for resistance to fire	See Annex C 3

#### 3.3 Hygiene, health and the environment (BWR 3)

Regarding dangerous substances there may be requirements (e.g. transposed European legislation and national laws, regulations and administrative provisions) applicable to the products falling within the scope of this European Technical Assessment. In order to meet the provisions of Regulation (EU) No 305/2011, these requirements need also to be complied with, when and where they apply.

English translation prepared by DIBt

**3.4 Safety and accessibility in use (BWR 4)**

For Basic requirement Safety in use the same criteria are valid as for Basic Requirement Mechanical resistance and stability.

**3.5 Protection against noise (BWR 5)**

Not relevant.

**3.6 Energy economy and heat retention (BWR 6)**

Not relevant.

**3.7 Sustainable use of natural resources (BWR 7)**

For the sustainable use of natural resources no performance was determined for this product.

**3.8 General aspects**

The verification of durability is part of testing the essential characteristics. Durability is only ensured if the specifications of intended use according to Annex B are taken into account.

**4 Assessment and verification of constancy of performance (AVCP) system applied, with reference to its legal base**

According to Decision 96/582/EC of the Commission of 24 June 1996 (Official Journal of the European Communities L 254 of 08.10.1996, p. 62–65) the system of assessment and verification of constancy of performance (see Annex V and Article 65 Paragraph 2 to Regulation (EU) No 305/2011) given in the following table apply.

Product	Intended use	Level or class	System
Metal anchors for use in concrete (heavy-duty type)	For fixing and/or supporting concrete structural elements or heavy units such as cladding and suspended ceilings	—	1

**5 Technical details necessary for the implementation of the AVCP system, as provided for in the applicable EAD**

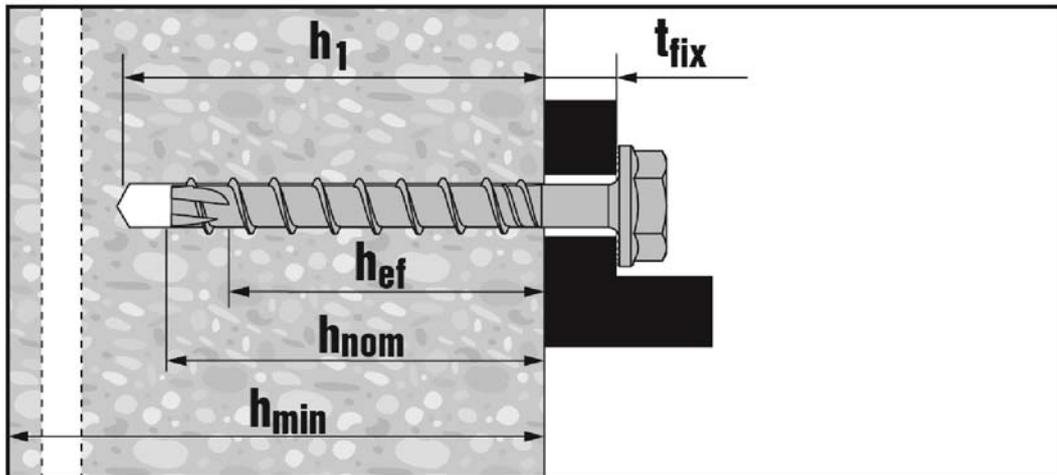

Technical details necessary for the implementation of the AVCP system are laid down in the control plan deposited at Deutsches Institut für Bautechnik.

Issued in Berlin on 13 January 2015 by Deutsches Institut für Bautechnik

Production description  
Material and screw types

**Annex A 3**

## Intended use

### Anchorage subject to:

- Static and quasi-static loads:  
HUS3-H and HUS3-C all sizes and all embedment depths.  
HUS3-HF diameters 10 and 14. Diameter 10 all the embedment depths, diameter 14  $h_1$  and  $h_2$  only.
- Seismic action for Performance Category C1: head types HUS3-H and HUS3-C only, all sizes for maximum embedment depth only ( $h_3$ ).
- Fire exposure: HUS3-H only (Hexagon head configuration) all sizes and all embedment depths.

### Base materials:

- Reinforced or unreinforced normal weight concrete according to EN 206-1:2000,
- Strength classes C20/25 to C50/60 according to EN 206-1:2000,
- Non-cracked or cracked concrete: all sizes and all embedment depths.

### Use conditions (Environmental conditions)

- Anchorages subject to dry internal conditions.

### Design:

- Anchorages are designed under the responsibility of an engineer experienced in anchorages and concrete work.
- Verifiable calculation notes and drawings are prepared taking account of the loads to be anchored. The position of the anchor is indicated on the design drawings (e.g. position of the anchor relative to reinforcement or to supports, etc.).
- Anchorages under static or quasi-static actions and under fire exposure are designed for design method A in accordance with:
  - Either ETAG 001, Annex C, Edition August 2010
  - Or CEN/TS 1992-4:2009
- Anchorages under seismic actions are designed in accordance with:
  - EOTA Technical Report TR 045, Edition February 2013
  - Anchorages shall be positioned outside of critical regions (e.g. plastic hinges) of the concrete structure.
  - Fastenings in stand-off installation or with a grout layer are not allowed.
- In case of requirements for resistance to fire exposure it must be ensured that local spalling of the concrete cover does not occur.

### Installation:

- Hammer drilling only: all sizes and all embedment depths.
- Anchor installation carried out by appropriately qualified personnel and under the supervision of the person responsible for technical matters of the site.
- In case of aborted hole: new drilling at a minimum distance away of twice the depth of the aborted hole or smaller distance if the aborted hole is filled with high strength mortar and if under shear or oblique tension load it is not the direction of the load application.
- After installation further turning of the anchor must not be possible.
- The head of the anchor must be supported on the fixture and is not damaged.
- Adjustability according to Annex B5 for:
  - Size 8 HUS3-H and HUS3-C ( $h_{nom2}=60\text{mm}$ )
  - Size 10 HUS3-H, HUS3-C and HUS3-HF ( $h_{nom2}=75\text{mm}$ )

### Installation instruction without adjustment

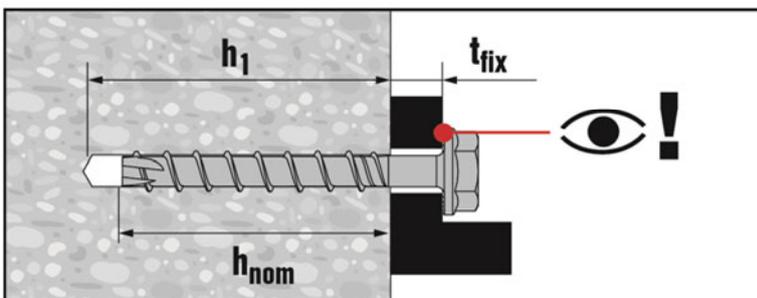

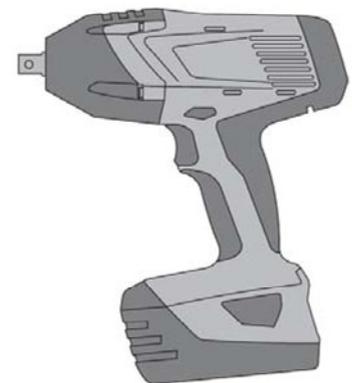

Make a cylindrical hole

Clean the borehole

Install the screw anchor by impact screw driver Hilti SIW 22T-A

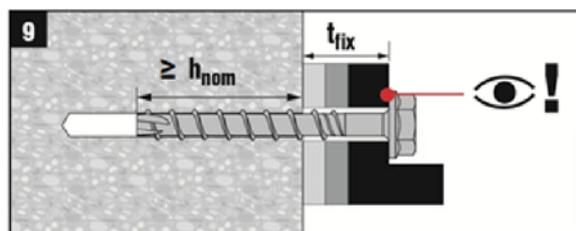

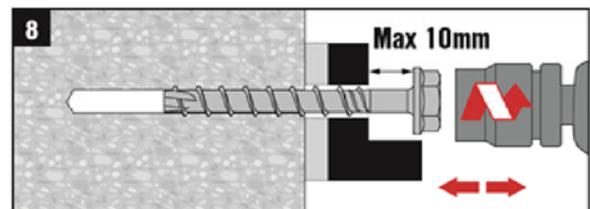

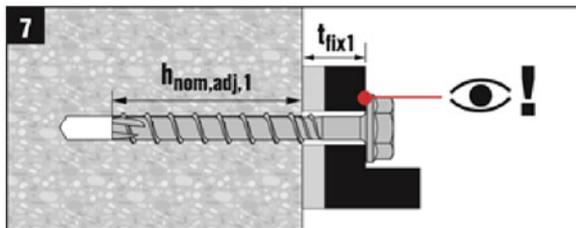

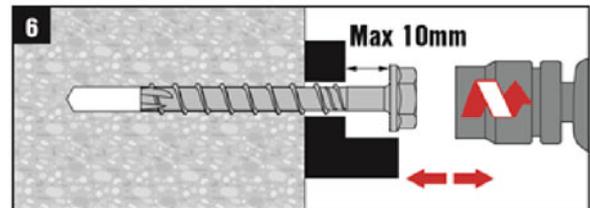

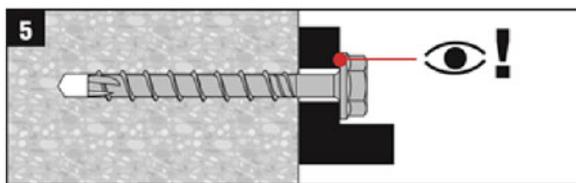

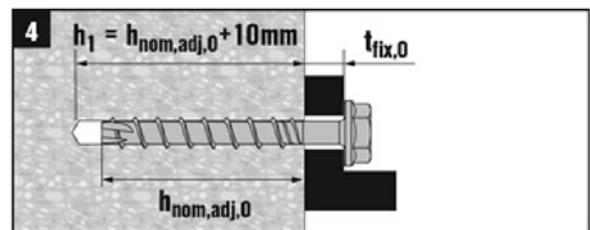

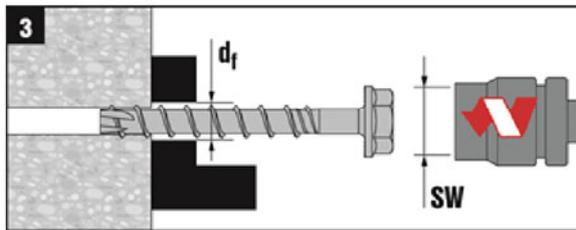

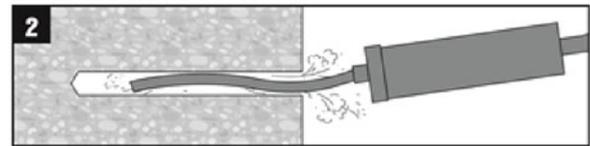

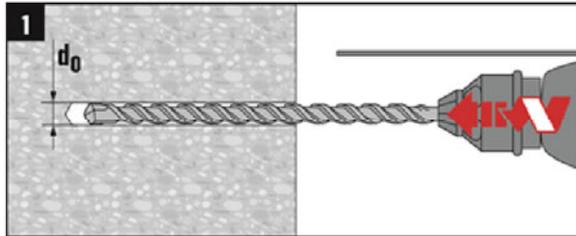

Ensure that the fixture is caught

**Hilti Screw anchor HUS3**

**Intended Use**  
Installation Instruction without adjustment

**Annex B 4**

### Installation instruction with adjustment

For setting HUS3-H8, HUS3-C 8 ( $h_{nom2} = 60$  mm) and HUS3-H, HUS3-C, HUS3-HF 10 ( $h_{nom2} = 75$  mm) it is allowed to adjust (loosening max. 10 mm and re-tightening) the screw. The adjustment can be done maximum two times.

The final embedment depth after adjustment process must be larger or equal than  $h_{nom2}$ .

The total allowed thickness of shims added during the adjustment process is 10mm.
