Do you approve the accompanying note outlining the reason for suppression, as reproduced below? This note will be used for the public consultation:

Difloxacin hydrochloride trihydrate is an active substance, a broad-spectrum fluoroquinolone antibiotic, used in veterinary medicine.

The test for related substances in this monograph does not comply with the current European Pharmacopoeia (Ph. Eur.) policy on impurities: it contains a limit test with an inappropriate quantitative expression for the acceptance criterion for total impurities. Therefore, this monograph requires a revision.

Since no approved products in Europe containing difloxacin hydrochloride trihydrate and no manufacturers of this active substance currently active on the European market could be identified, it is proposed to suppress the monograph on *Difloxacin hydrochloride trihydrate for veterinary use (2239)* from the Ph. Eur.
