Republic of Estonia Ministry of Climate

INVITATION TO ATTEND: Maritime ISR Summit

1. The Maritime ISR 2025 Conference will bring together senior representatives from NATO, allied nations, and the defence and technology sectors to examine the evolving landscape of maritime intelligence, surveillance, and reconnaissance (ISR). This year's agenda will focus on enhancing maritime situational awareness through the integration of advanced technologies such as AI, uncrewed systems, geospatial intelligence, and multi-domain data fusion. Creating a forum to support collaboration and knowledge exchange, strengthening maritime security and resilience.
2. We would also be honoured to extend this complimentary invitation to up to ten (10) accompanying personnel from your delegation. Discussions will address operational challenges in contested and congested waters, the role of ISR in joint naval operations, and the importance of secure data sharing across maritime domains.
3. The need for enhanced Maritime ISR has never been more urgent. As the maritime domain becomes increasingly complex, the integration of agile and innovative ISR technologies is more critical than ever. From the seabed to space, these capabilities are essential in maintaining strategic advantage and operational superiority. This year we place a focus on how cutting-edge solutions are being designed, developed, and deployed to meet the demands of tomorrow's maritime environment. At the same time, the complexity of integrating these capabilities across allied forces and domains presents significant challenges. Maritime ISR 2025 provides a timely and critical forum for operational leaders, procurement specialists, and R&D experts to address these issues collaboratively, ensuring that ISR capabilities evolve in step with the threats they are designed to counter.
4. As the Senior Military & Government Liaison for Defence iQ, I'm pleased to formally invite you to attend in person as our complimentary guest. The ideal delegation would be formed of officers, including procurement professionals currently working on maritime operations, Space communications or any specialists working with space-based data. Alongside these, officers working with AI, Analytics, Situational Awareness, Underwater or surface warfare and air surveillance. As well as senior leaders from operational commands that may benefit from collaboration and information exchange with their peers from other nations, and officers leading relevant research and technology programs.
5. There is no registration fee required for Active Military & Government personnel to attend the full two-day summit, giving you access to all the networking and speaker sessions. Please do not hesitate to contact Jamal Busari via email at jamal.busari@defenceiq.com or via telephone on +44 20-7368-9825 to coordinate your delegation. For our planning purposes, it would be much appreciated if your staff could indicate your intent to participate/initial delegation by Friday, 26th September. Signatures from myself as Senior Military & Government Liaison for Defence iQ are included below to confirm this offer.

Sincerely,
Jamal Busari
Senior Military & Government Liaison – Defence iQ
