Letter of Support: Metrosert AS

The Ministry of Defence confirms that we have reviewed the planned Unmanned Aerial Systems (UAS) laboratory capabilities, consultation and research services at Metrosert AS. We express strong interest in further developing our collaborative partnership with Metrosert AS.

Metrosert AS provides comprehensive research, testing, and consultation services for critical unmanned vehicles and military systems areas. This includes communication, navigation, flight physics, EMC, RCS, environmental and accelerated stress testing, and expert assessments.

We have identified the following areas for further cooperation and testing:

- 1. Collaboration on testing military systems, unmanned vehicles, and vehicle subsystems**
- 2. Collaboration on developing military systems, unmanned vehicles, and vehicle subsystems**
- 3. Support for R&D Grants**
- 4. Any other mutually agreed areas of cooperation.**

We believe that our shared goals and values make us natural partners. We would like to confirm that the Ministry of Defence, in line with our testing policy, is open to various forms of collaboration with Metrosert AS, including the joint use of testing labs and external testing sites for drone technologies.

We hope that this letter of support will enhance our cooperation and support our mutual efforts. The Ministry of Defence wishes the best of luck for Metrosert AS in its future endeavours.

With regards,

(digitally signed)

Miiko Peris
Director of Innovation Department
Ministry of Defence
