GLOBAL COMMUNITY AT DIGITAL ALMATY: PARTICIPATING COUNTRIES

ABOUT FORUM

Main aspects

- **Integrating AI into industrial ecosystems:**
AI-transformation of production, including the development of smart factories, modernization and automation as part of Industry 4.0
- **AI for sustainable development and ESG:**
AI solutions to environmental, sustainability and resource management challenges, digital strategies for environmentally responsible business
- **Integrating AI into economics and finance:**
AI in banking and fintech services, from automation to forecasting and analytics, sustainable growth and financial inclusion
- **AI in medicine, education and cybersecurity:**
Future biotechnologies, training for the digital economy, cyber defense and manageability in the face of growing threats

Why Industrial AI?

Digital Almaty 2025 is dedicated to revolutionary changes in industry and the impact of AI on the future of global industry. AI technologies are becoming a key driver of efficiency, safety and sustainability of production processes. The application of Industrial AI to automate, predict and optimize complex production chains opens new horizons for intelligent management of the industrial sector.

PARTICIPANT FEEDBACK

PARTICIPANT FEEDBACK

#SPONSOR

Timur Turlov**CEO Freedom Holding Corp**

“Dialogue is actually always important, it allows us to synchronize, it allows us to understand where we are. To see some spaces and possibilities for ourselves that we just didn't see before. Digitalization is actually a surprisingly universal story. It is everywhere, from mining to services and financial products.

#SPEAKER

Assel Zhanassova**CEO Kazpost JSC**

“Lots of people participate in the forum, startups, entrepreneurs. We participated in a panel session on the development of women's entrepreneurship in villages, how digitalization helps and I think there are a lot of ideas, solutions and this synergy will probably help people find each other, create businesses, create new digital services.

#SPEAKER

Jong Sung Hwang**President of NIA**

“ This is my first time at Digital Almaty, and I am impressed by the energy and diversity here. The forum holds great potential for promising projects and future achievements, especially with many young attendees who will lead Kazakhstan's industry. The range of technologies software, hardware, robotics offers valuable insights for companies, government organizations to learn from each other across domains.

PARTICIPANT FEEDBACK

#GUEST

Yerkin Tatishev

CEO Kusto Group

“There are a lot of good, different conferences in Kazakhstan. But I think this is one of those important conferences, because it concerns digitalization. And big business, and startups, and the state, and everything without any formality, all on one platform. This is one of the best examples of public-private partnership in the country.

#SPEAKER

Arman Suleimenov

Founder nFactorial School

“It’s a cool event, and I’m glad to be here. Such events create what is called serendipity, when there is such a Brownian motion, molecules are hitting, ideas collide and new ideas emerge, exchange, maybe new products emerge, new companies emerge, companies find investors, investors find companies.

#EXHIBITOR

Salamat Kabdulov

CEO Dereknet AI

“For our company, it was a stellar hour. We were given panel sessions, speakers, and the opportunity to present our startup to the prime ministers of the EAEU. Participation in the Industry 4.0 Startup Battle opened up the raising of investments. We leave the forum with great enthusiasm and a great charge.

PARTICIPANT FEEDBACK

#SPEAKER

Rostislav Konyashkin

VM MDDIAI RK

“I think that the forum is different from all previous years, that is, it is more a platform for interaction between G2G and large B2B sector, but more interaction with citizens, with small startups, it is really a very interesting event held at the highest level.

#EXPERT

Yersultan Yermanov

MDDIAI RK

“We highlighted a number of projects that became winners of the startup battle and spoke before heads of government. The forum showed that we have a lot of promising digital projects. The implementation of IT solutions ensures economic efficiency. It helps development and allows business owners to better understand what is going on.

#EXPERT

Alexey Anissimov

CDO, ME RK

“Digitalization helps us to be closer to the population, to be closer to business. And we really like this trend of “invisible government”, i.e. invisible government, when you get all the benefits quickly, clearly, transparently. And our GovTech is of course leading, at least in the post-Soviet space.
