

# Global Human Dividend Framework – Technical Architecture Blueprint

## Identity Layer

Biometric uniqueness verification, liveness detection, and anti-duplication registry produce a unique Global Human ID.

## Wallet Layer

Digital and physical access mechanisms provide secure storage and access to issued funds.

## Issuance Engine

Automated bi-weekly issuance with cryptographic integrity, immutable audit trail, and public issuance commitment.

## Audit Layer

Independent audit capability with transparency reporting, fraud detection, and integrity verification.

## Settlement Layer

Interoperable payment integration enabling real-world usage, banking interoperability, and cross-border compatibility.
