Kristen Michal

Prime Minister — Government Office of Estonia (Riigikantselei)
Stenbock House, Rahukohtu 3
15161 Tallinn
Estonia

Tallinn, September 11, 2026

Dear Prime Minister,

On behalf of VITRIX OÜ, an automated code architecture and digital infrastructure firm based in Tallinn, I am writing to commend Estonia's vanguard leadership in global digitalization and to propose a strategic evolution in technological sovereignty.

As public administration and critical national infrastructure increasingly integrate autonomous systems and artificial intelligence, an invisible vulnerability emerges: the absence of mathematical guarantees and immutable forensic auditability regarding automated decisions and data flows across systems.

We have engineered sovereign code architectures—autonomously orchestrated through specialized agents and underpinned by an encrypted forensic ledger—that guarantee zero data egress and strict compliance with the EU AI Act under Estonian jurisdiction.

We would welcome the opportunity to present a private demonstration of our technical capabilities and explore how this infrastructure can reinforce the national security and digital competitiveness goals you champion.

We remain at your entire disposal through our institutional channels.

Private institutional demonstration access:
