To: National Focal Points for Tuberculosis
CC: National Coordinators, ECDC contractors, ECDC project manager

Dear National Focal Point for Tuberculosis,

The European Centre for Disease Prevention and Control (ECDC) has
contracted a consortium of experts from KIT Royal Tropical Institute
(lead partner), KNCV Tuberculosis Foundation, Sheffield Centre for Health
and Related Research and the Amsterdam Institute for Global Health and
Development to implement the project Estimating the burden of
tuberculosis infection in the EU/EEA.

The objective of the project is to estimate the prevalence of
tuberculosis (TB) infection and rate of progression to TB disease in at-
risk groups among selected countries in the EU/EEA.

This project was introduced to the ECDC TB Disease Network during the meeting held in mid-May in the Netherlands. Enclosed please find a synopsis of the project for your information.

The first phase of the project consists of a feasibility study to assess the availability and accessibility of already existing data sources necessary for generating country-specific estimates of TB infection prevalence and progression to TB disease in pre-defined at-risk populations.

We would appreciate your contribution to this feasibility study by completing an online survey.

In the upcoming days you will receive an email invite from Ineke Spruijt (ineke.spruijt@kncvtbc.org) to complete the survey. Please note we are kindly requesting only one reply per country. Further information and guidance will be shared in the invitation email.

Should you have any questions about the project, please feel free to contact me () and Ineke Spruijt ().

Best regards,

Senia Rosales-Klintz (project manager)
