	End of month indicators evolution in 2023												
	JAN	FEB	MAR	APR	MAY	JUN	JUL	AUG	SEP	ОСТ	NOV	DEC	
KEA	5.99%	6.32%	6.43%	6.48%	6.53%	6.59%	6.60%	6.62%	6.60%	6.60%	6.58%	6.55%	
KEP	6.28%	6.61%	6.74%	6.80%	6.85%	6.89%	6.89%	6.90%	6.85%	6.85%	6.83%	6.77%	
KES	6.26%	6.57%	6.68%	6.72%	6.75%	6.80%	6.79%	6.79%	6.75%	6.74%	6.71%	6.65%	

The indicators are the ratio of flown distance and achieved distance over all (portions of) trajectories over a one year rolling window, excluding the ten best and ten worst days. The rolling window stops at the last day of the month.

1. Overview

Estonia identified two airports, Tallinn and Tartu, as subject to RP3 monitoring. In accordance with IR (EU) 2019/317 and the traffic figures at these 2 airports, additional taxi-out and ASMA times are not monitored and the environmental performance focuses only on the share of arrivals applying CDO.

Traffic at these Estonian airports in 2023 was still 23% lower than in 2019.

The share of CDO flights is in the higher range of all observed values in 2023. Estonia has the highest share of CDO flights when calculated by State (65.5%).

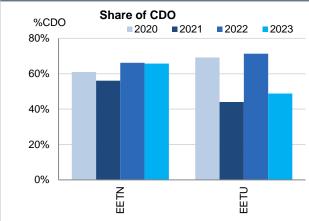

2. Additional Taxi-Out Time

This indicator is not monitored for airports below 80 000 IFR movements average during the 2016-2018 period, so it is not monitored for any airport in this state.

3. Additional ASMA Time

This indicator is not monitored for airports below 80 000 IFR movements average during the 2016-2018 period, so it is not monitored for any airport in this state.

The share of CDO flights has stayed stable for Tallin (EETN) but has significantly decreased again for Tartu (EETU): -22.5 percentage points with respect to 2022. They are still well above the overall RP3 value in 2023 (28.8%). Tallin (EETN) is in the top 10 of all observed values in 2023.

ESTONIA CAPACITY - En-route

Minutes of ATFM en-route delay										
2020 2021 2022 2023 2024 Observations										
National Target	0.05	0.01	0.03	0.03	0.03					
Actual performance	0.00	0.00	0.00	0.00						

NSA's assessment of capacity performance

In operational context, in 2023 we faced significant challenges and modest recovery across different quarters. The year was largely impacted by the ongoing Russian aggression against Ukraine, comparable in its effects to the COVID-19 pandemic. The Estonian airspace continues to be impacted by sanctions and the resulting decrease in air traffic between Europe and Asia.

In 2023, Estonia experienced a slight increase in flights compared to the previous year but still faced significant decrease compared to 2019.

The en route capacity targets of Estonia, measured in minutes of ATFM delay per flight for 2023, was set at 0.03 minutes. The actual ATFM delay per flight for 2023 was recorded at 0.0 minutes. No capacity issues have been identified. Air traffic flows have remained significantly below 2019 levels due to the sanctions on Russia and airspace closures caused by Russia's war against Ukraine.

Monitoring process for capacity performance

Review of the actual values from the NM dashboard.

Capacity Planning

Due to the limited traffic volumes capacity planning remains standard. ATFM delays are anticipated to remain at zero, as capacity continues to align with user demand

ATCO in OPS (FTE)

Planned (Perf Plan)	-	-	25	27	27	27				
Actual	30	23	23	23	21					

Additional Information Related to Russia's War of Aggression Against Ukraine

Estonian airspace continues to be impacted by sanctions and the resulting decrease in air traffic between Europe and Asia. The ANSP has had to scale down and streamline operations while maintaining readiness for when traffic picks up again.

Summary of capacity performance

Estonia experienced an increase in traffic from 142k flights in 2022, to 148k flights in 2023 with zero ATFM delay. Traffic levels remain significantly below the 227k flights handled in 2019.

ESTONIA CAPACITY - Airports

1. Overview

Estonia identified two airports, Tallinn and Tartu, as subject to RP3 monitoring. In accordance with IR (EU) 2019/317 and the traffic figures at these 2 airports, pre-departure delays are not monitored and the capacity performance focuses on arrival ATFM delays and slot adherence.

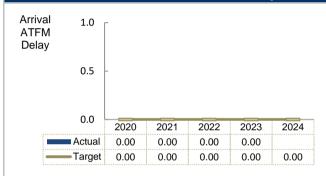

Traffic at these Estonian airports in 2023 was still 23% lower than in 2019.

Like in the rest of RP3, no arrival ATFM delays were observed in the entire 2023 at these two airports and slot adherence remained very high (2023: 98.9%; 2022: 98.3%).

Like in previous years, no arrival ATFM delay was observed at the Estonian airports (Tallinn and Tartu) in 2023. According to the Estonian monitoring report, this is due to low traffic volumes and well functioning systems

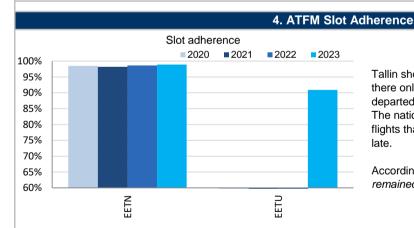

3. Arrival ATFM Delay - National Target and Incentive Scheme

The Estonian performance plan sets a national target on arrival ATFM delay for all RP3 of 0.0 min/arr. This target, like in the rest of RP3, was met in 2023 with an actual performance of 0.0 min/arr.

The Estonian performance plan does not establish any bonus.

According to the Estonian monitoring report: Since the number of flights remains low and the number of delays attributable to EANS is zero, there is no point in establishing a bonus, as a bonus should motivate change, but it is impossible to improve non-existent delays.

Tallin showed very high slot adherence (98.9%) and at Tartu there only 11 regulated departures in 2023, from which only 1 departed outside of the STW.

The national average was 98.9%. With regard to the 1.1% of flights that did not adhere, 0.3% was early and 0.8% was late.

According to the Estonian monitoring report: *Performance* remained on the same high level.

5. ATC Pre-departure Delay

This indicator is not monitored for airports below 80 000 IFR movements annual average during the 2016-2018 period, so it is not monitored for any airport in Estonia.

6. All Causes Pre-departure Delay

This indicator is not monitored for airports below 80 000 IFR movements annual average during the 2016-2018 period, so it is not monitored for any airport in Estonia.

1. Contextual economic information: en route air navigation services

· Estonia ECZ represents 0.4% of the SES en route ANS actual costs in 2023

National currency: EUR

Performance Plan: RP3 draft performance plan dated 10 February 2022 and found consistent as per Commission Decision (EU) 2022/771 of 13 April 2022

The final version of the plan was adopted and published by Estonia in accordance with Article 16 (a) of Regulation (EU) 2019/317

2. Monitoring of the en route determined unit cost (DUC) at charging zone level

The **Determined Unit Cost (DUC)** is the cost per service unit, at which the service is planned to be provided during the year. The **Actual Unit Cost (AUC)** reflects the cost per service unit, at which the service has actually been provided during the year.

The monitoring of the DUC / AUC is carried out in national currency in real terms, at 2017 prices.

3. En re	oute actual unit cost (AUC) vs. en rout	te determined u	init cost (DUC)

4. Focus on en route DUC monitoring at charging zone level

AUC vs. DU

In 2023, the en route AUC was +59.3% (or +18.12 €2017) higher than the planned DUC. This results from the combination of significantly lower than planned TSUs (-48.4%) and significantly lower than planned en route costs in real terms (-17.9%, or -4.7 M€2017). It should be noted that actual inflation index in 2023 was +31.3 p.p. higher than planned.

En route service units

The difference between actual and planned TSUs (-48.4%) falls outside the ±10% threshold foreseen in the traffic risk sharing mechanism. The resulting loss of en route revenues is therefore shared between the ANSP and the airspace users, with the ANSP (EANS) bearing a loss of -0.7 M€2017.

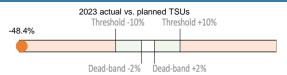

En route costs by entity

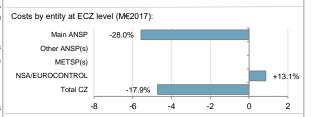

Actual real en route costs are -17.9% (-4.7 M€2017) lower than planned. This is the result of lower costs for the main ANSP, EANS (-28.0%, or -5.6 M€2017) and higher costs for the NSA/EUROCONTROL (+13.1%, or +0.9 M€2017).

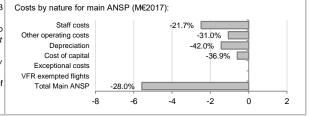

En route costs for the main ANSP (EANS) at charging zone level

Significantly lower than planned en route costs in real terms for EANS in 2023 (-28.0%, or -5.6 M€2017) result from:

- Significantly lower staff costs (-21.7%) in real terms due to the inflation index impact (+31.3 p.p.) since, in nominal terms, staff costs are in line with the plan (+0.03%).
- Significantly lower other operating costs (-31.0%) reflecting the impact of inflation index but also "extensive cost-cutting measures to reduce losses. Travelling expenses, equipment maintenance costs and training expenses were the main items for savings",
- Significantly lower depreciation (-42.0%), reflecting "changes in actual investment costs of new investments due to a delayed/postponed implementation",
- Significantly lower cost of capital (-36.9%) reflecting the use of lower than planned share of financing through equity.

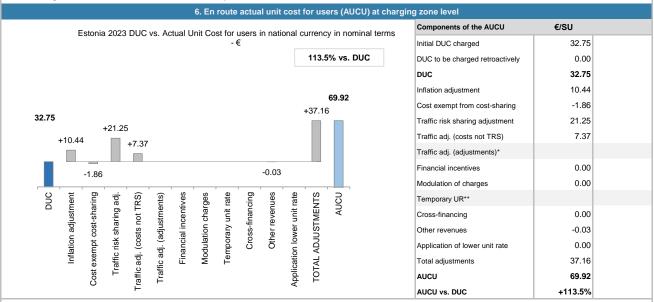

5. Monitoring of the en route actual unit cost for users (AUCU) at charging zone level

The Actual Unit Cost for Users (AUCU) reflects the price per service unit that is charged in fine to users for the services provided in the year. It corresponds to the sum of the DUC for the year and of the different adjustments stemming from that year.

The monitoring of the AUCU is carried out in national currency in nominal terms.

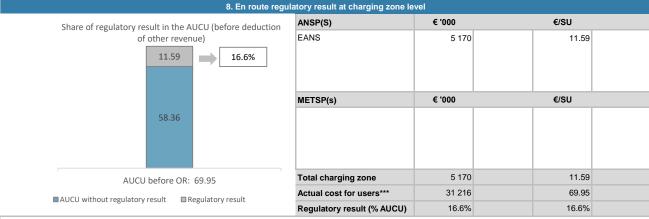

The traffic adjustment on adjustments is not considered to avoid double counting, as the related adjustments have already been taken into account in full in the AUCU for the current year or

previous years.

** The difference in revenue due to the application of the temporary unit rates in 2023, if applicable, is already reflected in the DUC (part to be charged retroactively) and is therefore not considered in the total adjustments, in order to avoid double counting.

	7. En route costs exempt from cost sharing								
		€ '000		€/SU					
	New and existing investments	-1 689		-3.78					
	Competent authorities and qualified entities costs	839		1.88					
by item	Eurocontrol costs	19		0.04					
by i	Pension costs	0		0.00					
	Interest on loans	0		0.00					
	Changes in law	0		0.00					
Total costs e	cempt from cost sharing	-831		-1.86					

These costs will be recovered from (+) or reimbursed to (-) users. These may be subject to change following user consultation and NSA Report on the verification of cost-sharing.

^{***} before deduction of other revenues, as is the case for the regulatory results (see items 10 to 13)

9. Focus on en route AUCU monitoring at charging zone level

The actual en route unit cost incurred by airspace users (AUCU) in respect of activities performed in 2023 (69.92 €) is +113.5% higher than the nominal DUC (32.75 €). The difference between these two figures (+37.16 €/SU) is due to:

- the positive inflation adjustment resulting from higher than planned inflation (+10.44 €/SU);
- the impact of adjustments resulting from the costs exempted from cost-sharing mechanism (-1.86 €/SU);
- the addition of the traffic risk sharing adjustments (+21.25 €/SU);
- the addition of the traffic adjustment (+7.37 €/SU) for the costs not subject to traffic risk sharing; and
- the deduction of the other revenues (-0.03 €/SU).

The share of the regulatory result (see items 10 to 13) in the AUCU (before the deduction of other revenues) is 16.6%.

Note that the cost exempt from cost sharing presented in this report for 2023 are preliminary figures which are subject to change based on the information that will be provided in the NSA Reports on the verification of the cost sharing to be submitted by the 1st September 2024. These changes may affect the analysis of the Actual Costs for Users (boxes 6 9) and of the regulatory result (boxes 11-14 for en route and terminal, and box 3 for gate-to-gate).

10. Monitoring of the en route ANSPs regulatory results (RR)

The Regulatory Result (RR) corresponds to the revenues generated by the activities of the year, that exceed the direct and indirect operating costs of an ANSP, and so provide for a reasonable return on assets to contribute towards necessary capital improvements. The notion of RR focuses on the ANSP results entitled to the ANS activity in the year. It is therefore different from the net accounting profit disclosed in ANSPs financial statements. Also, it does not take into account any opportunity cost.

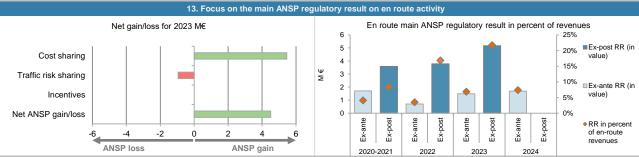

The RR, when expressed in percentage of the revenues, can be associated to a "margin" generated by the ANSP with respect to the activity of the year, but it is not comparable to the margin that would be calculated straight from ANSPs financial statements.

- Ex-ante, the RR is equal to the RoE (in value) included in the determined cost of capital.
- Ex-post, the RR is the sum of the RoE (in value) in the actual cost of capital and the net gain/loss resulting from risk sharing and incentives generated from that year.

The **net gain/loss** calculated in box 11 results from the combination of three distinct items: a) the outcome of the cost-sharing mechanism to be retained by the ANSP (including the impact of costs exempted from cost-sharing and of the inflation adjustment); b) the outcome of the traffic risk sharing mechanism; and c) the outcome of the financial incentive mechanism for capacity and environment targets.

The monitoring of the RR is carried out in national currency in nominal terms.

11. Net gain/loss for the main ANSP for the en route activity at charging zone level

EANS net gain on activity in the Estonia en route charging zone in the year 2023

EANS reported a net gain of +4.5 M€, as a combination of a gain of +5.5 M€ arising from the cost sharing mechanism, with a loss of -0.9 M€ arising from the traffic risk sharing mechanism

EANS overall regulatory results (RR) for the en route activity

Ex-post, the overall RR taking into account the net gain from the en route activity mentioned above (+4.5 M€) and the actual RoE (+0.7 M€) amounts to +5.2 M€ (21.7% of the en route revenues). The resulting ex-post rate of return on equity is 56.8%, which is substantially higher than the 7.3% planned in the PP.

1. Contextual economic information: terminal air navigation services

Estonia TCZ represents 0.2% of the SES terminal ANS actual costs in 2023

2 · Airports with fewer than 80,000 IFR mvmts: Number of airports in charging zone in 2023: of which: · Airports with more than 80,000 IFR mvmts: 0

National currency: EUR

Performance Plan: See item 1 for the en route charging zone(s)

2. Monitoring of the terminal determined unit cost (DUC) at charging zone level

The Determined Unit Cost (DUC) is the cost per service unit, at which the service is planned to be provided during the year. The Actual Unit Cost (AUC) reflects the cost per service unit, at which the service has actually been provided during the year.

The monitoring of the DUC / AUC is carried out in national currency in real terms, at 2017 prices.

3. Term	inal actual unit cost (AUC) vs. termina	l determined u	nit cost (DUC)

4. Focus on terminal DUC monitoring at charging zone lev

AUC vs. DUC

In 2023, the terminal AUC was +24.3% (or +30.52 €2017) higher than the planned DUC. This results from the combination of significantly higher than planned terminal costs in real terms (+14.5%, or +0.3 M€2017) and significantly lower than planned TNSUs (-7.9%). It should be noted that actual inflation index in 2023 was +31.3 p.p. higher than planned.

Terminal service units

The difference between actual and planned TNSUs (-7.9%) falls outside the +2% dead band, but does not exceed the ±10% threshold foreseen in the traffic risk sharing mechanism. The resulting loss of terminal revenues is therefore shared between the ANSP and the airspace users, with the ANSP (EANS) bearing a loss of -0.1 M€2017.

Terminal costs by entity

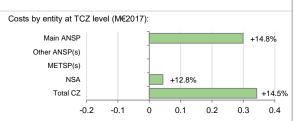

Actual real terminal costs are +14.5% (+0.3 M€2017) higher than planned. This is the result of higher costs for the main ANSP, EANS (+14.8%, or +0.3 M€2017) and the NSA (+12.8%, or +0.04 M€2017)

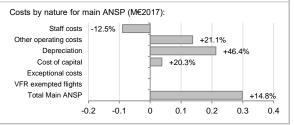

Terminal costs for the main ANSP (EANS) at charging zone level

Significantly higher than planned terminal costs in real terms for EANS in 2023 (+14.8%, or +0.3 M€2017) result from:

- Significantly lower staff costs (-12.5%) in real terms due to the inflation index impact (+31.3) p.p.). In nominal terms, staff costs are above the plan (+11.8%), which, based on the information provided by Estonia, is due to the fact that "higher proportion of actual costs were allocated to terminal costs" due to a significantly lower en route traffic.
- Significantly higher other operating costs (+21.1%), which, as already detailed above, is also explained by the changes in the allocation of actual costs.
- Significantly higher depreciation (+46.4%), reflecting continuation of the invesment programme, including projects which had been postponed in previous years.
- Significantly higher cost of capital (+20.3%) reflecting a combination of higher than planned interest rate on debt and higher proportion of financing through equity.

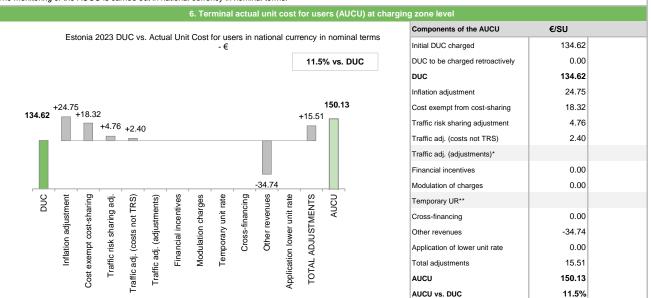

5. Monitoring of the terminal actual unit cost for users (AUCU) at charging zone level

The Actual Unit Cost for Users (AUCU) reflects the price per service unit that is charged in fine to users for the services provided in the year. It corresponds to the sum of the DUC for the year and of the different adjustments stemming from that year.

The monitoring of the AUCU is carried out in national currency in nominal terms.

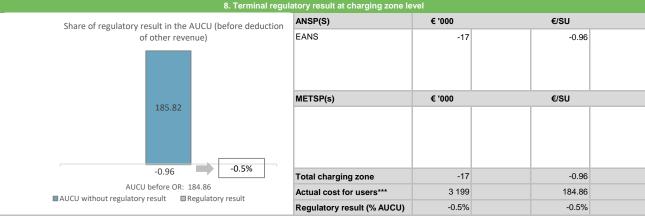

The traffic adjustment on adjustments is not considered to avoid double counting, as the related adjustments have already been taken into account in full in the AUCU for the current year or

previous years.

** The difference in revenue due to the application of the temporary unit rates in 2023, if applicable, is already reflected in the DUC (part to be charged retroactively) and is therefore not considered in the total adjustments, in order to avoid double counting.

	7. Terminal costs exempt from cost sharing								
		€ '000	€/SU						
	New and existing investments	274	15.81						
	Competent authorities and qualified entities costs	43	2.51						
by item	Eurocontrol costs	0	0.00						
by i	Pension costs	0	0.00						
	Interest on loans	0	0.00						
	Changes in law	0	0.00						
Total costs ex	empt from cost sharing	317	18.32						

These costs will be recovered from (+) or reimbursed to (-) users. These may be subject to change following user consultation and NSA Report on the verification of cost-sharing.

^{***} before deduction of other revenues, as is the case for the regulatory results (see items 10 to 13)

9. Focus on terminal AUCU monitoring at charging zone level

The actual terminal unit cost incurred by airspace users (AUCU) in respect of activities performed in 2023 (150.13 €) is +11.5% higher than the nominal DUC (134.62 €). The difference between these two figures (+15.51 €/SU) is due to:

- the positive inflation adjustment resulting from higher than planned inflation (+24.75 €/SU);
- the impact of adjustments resulting from the costs exempted from cost-sharing mechanism (+18.32 €/SU);
- the addition of the traffic risk sharing adjustments (+4.76 €/SU);
- the addition of the traffic adjustment (+2.40 €/SU) for the costs not subject to traffic risk sharing; and
- the deduction of the other revenues (-34.74 €/SU).

The share of the regulatory result (see items 10 to 13) in the AUCU (before the deduction of other revenues) is -0.5%.

Note that the cost exempt from cost sharing presented in this report for 2023 are preliminary figures which are subject to change based on the information that will be provided in the NSA Reports on the verification of the cost sharing to be submitted by the 1st September 2024. These changes may affect the analysis of the Actual Costs for Users (boxes 6 9) and of the regulatory result (boxes 11-14 for en route and terminal, and box 3 for gate-to-gate).

10. Monitoring of the terminal ANSPs regulatory results (RR)

The Regulatory Result (RR) corresponds to the revenues generated by the activities of the year, that exceed the direct and indirect operating costs of an ANSP, and so provide for a reasonable return on assets to contribute towards necessary capital improvements. The notion of RR focuses on the ANSP results entitled to the ANS activity in the year. It is therefore different from the net accounting profit disclosed in ANSPs financial statements. Also, it does not take into account any opportunity cost.

The RR, when expressed in percentage of the revenues, can be associated to a "margin" generated by the ANSP with respect to the activity of the year, but it is not comparable to the margin that would be calculated straight from ANSPs financial statements.

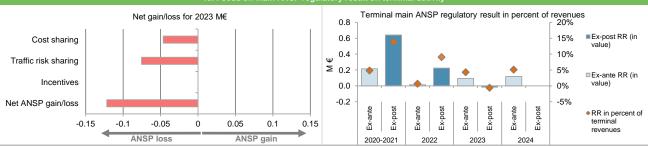

- Ex-ante, the RR is equal to the RoE (in value) included in the determined cost of capital.
- Ex-post, the RR is the sum of the RoE (in value) in the actual cost of capital and the net gain/loss resulting from risk sharing and incentives generated from that year.

The **net gain/loss** calculated in box 11 results from the combination of three distinct items: a) the outcome of the cost-sharing mechanism to be retained by the ANSP (including the impact of costs exempted from cost-sharing and of the inflation adjustment); b) the outcome of the traffic risk sharing mechanism; and c) the outcome of the financial incentive mechanism for capacity and environment targets.

The monitoring of the RR is carried out in national currency in nominal terms.

EANS net gain on activity in the Estonia terminal charging zone in the year 2023

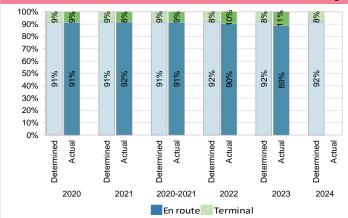

EANS reported a net loss of -0.1 M€, as a combination of a loss of -0.05 M€ arising from the cost sharing mechanism, with a loss of -0.1 M€ arising from the traffic risk sharing mechanism.

EANS overall regulatory results (RR) for the terminal activity

Ex-post, the overall RR taking into account the net loss from the terminal activity mentioned above (-0.1 M€) and the actual RoE (+0.1 M€) amounts to -0.02 M€ (-0.6% of the terminal revenues). The resulting ex-post rate of return on equity is negative (-1.2%).

En route share in p.p.

2. Share of en route and terminal in gate-to-gate actual costs (2023)

In 2023, actual gate-to-gate ANS costs are -15.2% (-4.4 M€2017) lower than planned, as en route costs are lower than planned by -4.7 M€2017 and terminal costs are higher than planned by +0.3 M€2017.

The actual share of en route in gate-to-gate ANS costs (89%) is lower than planned in the PP for 2023 (91.8%).

3. Gate-to-gate regulatory result (RR) 2023

In € '000		Ex-	ante			Ex-	post	
ANSP(S)	RR	Revenues	RR % revenues	•	RR	Revenues	RR % revenues	3
EANS	1 585	23 980	6.6%		5 153	26 629	19.4%	
METSP(s)	RR	Revenues	RR % revenues	,	RR	Revenues	RR % revenues	3
Total	1 585	23 980	6.6%		5 153	26 629	19.4%	

For the ANSPs providing services in the en route and terminal charging zones of Estonia covered by the SES performance scheme, the ex-post gate-to-gate regulatory result in 2023 amounts to +5.2 M€ (+5.2 M€ for en route and -0.02 M€ for terminal - see boxes 10 to 14 for the detailed analysis at charging zone level), corresponding to 19.4% of gate-to-gate ANS revenues.

This is higher than the return planned for the year (6.6% of gate-to-gate revenues).
