

Confirmation on the use of NATO F-63 fuel with Volvo EUR Stage III engines

This is to confirm that any lift truck model in Konecranes Lift Trucks product range, that is equipped with a Volvo EUR Stage III engine - i.e. TAD551VE, TAD851VE, TAD853VE, TAD1151VE, and TAD1351VE - may technically be operated on NATO F-63 with no significant impact on functionality or performance.

Initially, oil analysis at regular engine oil replacement interval is recommended to determine possible need for more frequent engine oil replacement.

Volvo has not formally approved the use of F-63, which requires extensive engine testing. Therefore, possible warranty claims where the root cause can be traced to the use of F-63 fuel, might not be approved by Volvo.
