Minor changes to RESPISURV

Minor change in RespSupport in RESPISURV to align better with SARISURV

Proposed, to match SARISURV:

Respiratory support

Field: RespSupport

Coded value list: RespSupportSARI2

Coding:

NONE	=	No respiratory support given
OXYGEN	=	High-flow oxygen therapy (non-invasive ventilation)
VENT	=	Invasive Ventilation
ECMO	=	Extra Corporeal Membrane Oxygenation
O	=	Other respiratory support
UNK	=	Respiratory support given unknown

Level of respiratory support given to patient. Please indicate the most invasive that applied.

[NEW for both RESPISURV & SARISURV]: If possible to distinguish between low-flow and high-flow oxygen support, please report low-flow oxygen into "O" and high-flow oxygen into "OXYGEN".

If that is not possible, please report both low- and high-flow oxygen into "OXYGEN".

Current RESPISURV:

Respiratory support

Field: RespSupport

Coded value list: RespSupportNCOV

Coding:

N	=	No
OXYGEN	=	Oxygen therapy
VENT	=	Ventilator including non-invasive positive pressure vent
ECMO	=	Extracorporeal membrane oxygenation
O	=	Other
UNK	=	Unknown

Level of respiratory support given to patient.
