**Airspace risk assessment questionnaire for
the affected parties in the vicinity of Tallinn**

In 2020-2021, the Transport Administration started an airspace risk assessment project in cooperation with Eurocontrol to ensure the safe flight of unmanned aircraft in the vicinity of Tallinn (Tallinn city and Harju County). After a two-year break, the project has been launched again, now focusing on the preparation of an airspace risk analysis in accordance with the new European Commission implementing regulation (EU 2021/664, April 22, 2021, on the U-space legal framework), as a result of which it will be possible to create the U-space to Tallinn airspace in the future in the vicinity of the airport and within the city of Tallinn and Harju County. We carry out the airspace risk assessment on the basis of the guidance material prepared by the Eurocontrol.

The risk analysis is carried out under the leadership of the Transport Administration in accordance with the requirements set out in Commission Implementing Regulation (EU) 2021/664. Preparing an airspace risk analysis also includes the involvement of affected parties and your input. We would like to ask your feedback on the questionnaire attached to the letter. Please send your feedback to the e-mail address pavel.buhharin@transpordiamet.ee by the 6th of March 2024 at the latest.

Questions:

1. Do you consider the provision of optional U-space services (weather information and conformance monitoring) as an integral part of your business case?
2. Do you expect to become certified USSP in Estonia? If yes then when (estimated timeline)?
3. What are your means to receive e-conspicuity data? (e.g. ADS-L, SRD, Mobile networks)
4. Through what means do you interface with UAS operators? (e.g. internet, mobile networks)

Yours sincerely,

(Digitally signed)
