Dear Estonia

Integra proposes a Climate Ark east of west of Tartu

The Ark aims to provide accommodation for future generations; 5,000-500,000 inhabitants with at least 50% for youth up to 30 years, so that the 20s-30s can take care of the younger occupants.

The Ark can be energy self-sufficient by using 24/7 renewable energy for electricity, water purification and desalination, heating, cooling and green hydrogen for fertilisers and food production.

Half the area of the Ark could be used for households, education, transportation, energy storage and medical centres, and the balance for commercial buildings and services-based industries.

The Ark and its infrastructure could be financed by international and local sources and development finance institutions.

We hope this idea is of interest and look forward to hearing from you.

With best regards

Mr. Michael See
