

**ASSESSMENT OF ANNUAL MEDICAL AND SCIENTIFIC REQUIREMENTS FOR SUBSTANCES
IN SCHEDULES II, III AND IV
OF THE CONVENTION ON PSYCHOTROPIC SUBSTANCES OF 1971**

(to be furnished to the International Narcotics Control Board (INCB) pursuant to
Economic and Social Council resolutions 1981/7, 1991/44, 1993/38 and 1996/30)

Country or Territory:	ESTONIA	Date:	14.08.2024
Competent office:	State Agency of Medicines		
Title or function:	Specialist / Bureau of Import and Export Supervision		
Responsible officer's name:	Terje Parts	Email:	Terje.Parts@ravimiamet.ee
Telephone number(s):	+372 7 374 140	Fax number(s):	
Signature:			
These assessments should be effective as of:		September 2024	

CHANGES IN ESTABLISHING ASSESSMENTS OF *delta*-9-TETRAHYDROCANNABINOL (*delta*-9-THC)

Assessments of annual medical and scientific requirements should include
quantities of *delta*-9-tetrahydrocannabinol (*delta*-9-THC) of natural and synthetic origin

This form can also be downloaded from the INCB website at:
www.incb.org, under “Psychotropic Substances/Toolkit/Form B/P and Supplement”
Please consider submitting this form using XML format.

This form should be completed and sent to:

International Narcotics Control Board
Vienna International Centre
P.O. Box 500, 1400 Vienna, Austria
Telephone: + (43) (1) 26060-4277 Facsimile: + (43) (1) 26060-5867 or 26060-5868
Email: incb.secretariat@un.org, incb.psychotropics@un.org Home page: www.incb.org

Total quantities required annually for medical and scientific purposes

Form B/P may be used to submit assessments for all psychotropic substances to be used in the country. Assessments should reflect the total domestic medical and scientific requirements for one year. They should therefore include quantities to be manufactured domestically and not be restricted to imports. Quantities needed for industrial purposes (i.e. to manufacture other substances) should be included and the purposes should be indicated (i.e. qualitative and quantitative information on final products). The assessments should further include requirements to be held in stock to meet exceptional circumstances. Quantities required for exports or re-exports should not be included in the assessments. Assessments of *delta*-9-THC should include quantities of natural and synthetic origin.

All Governments are encouraged to provide information on the method used to determine the assessments furnished in Form B/P. In this context, the ***Guide on Estimating Requirements for Substances under International Control***, available at www.incb.org, might be useful. The *Guide* is intended to assist competent national authorities in identifying methods for calculating the quantities of controlled substances required for medical and scientific purposes and may assist authorities in preparing the assessments of annual requirements for psychotropic substances.

Unlike estimates for narcotic drugs, the assessments for psychotropic substances are not required to be confirmed by the International Narcotics Control Board (INCB).

INCB recommends that a revised Form B/P be submitted at least once every three years. INCB will use reported assessments for reference during a three-year period unless a supplement to previously submitted assessments is received. The quantities indicated on Form B/P will be used as a guide by the authorities responsible for authorizing exports in exporting countries.

Assessments are updated on a weekly basis and placed on the INCB website at: www.incb.org, under “Psychotropic Substances/Status of Assessments”.

STATEMENT OF THE METHOD

Please provide here comments on the methods used in determining the various assessments reported on this form and/or any changes.

One licenced company deals with the import mostly from USA of pure reference substances and solutions (in methanol, ethanol and acetonitrile) (Reference Material (RM) and Certified Reference Material (CRM)) for the purpose of re-export to EU and Middle-East to research and forensic laboratories for scietific and forensic purposes.

The use of Dexamfetamine, Lisdexamfetamine dimesylate and methylphenidate in the treatment of ADHD has increased. Lisdexamfetamine dimesylate has been converted to Dexamfetamine.

delta-9-THC* - Bedrocan 5 cannabis products (flos and granular form) applied by doctors for specific patients
