Our ref 23.09.2025 nr 1.6-3/25/16100-1

CONFIRMATION LETTER/REFERENCE

The Estonian Transport Administration hereby confirms that AS Datel has been a trusted technology partner to the Administration in the delivery, operation and continuous improvement of mission-critical digital services and information systems.

AS Datel's teams have provided analysis, design, software development, integration, data migration, deployment, training and support across the Administration's functional domains.

In particular, AS Datel has been a long-standing partner to the Estonian Traffic Register in the testing and development of its core modules. The Register and its modules are integrated with multiple third-party stakeholders and consume and publish services via the national X-Road data-exchange layer. Datel's engineers have supported end-to-end integration and conformance testing across these interfaces and have contributed to the delivery of reliable, secure and high-performance services in production.

Throughout our cooperation, AS Datel has demonstrated professionalism, strong domain knowledge and adherence to security and interoperability requirements, including secure development practices, auditability and service-level performance in the Government Data Centre environments.

This confirmation is issued at the request of AS Datel for use in international tenders. Should you require any additional information, please contact us at the Estonian Transport Administration.

Yours sincerely,

Remo Kuningas
Head of Unit
IT Development Unit
