

**Ministry of the Interior**  
Mr. Lauri Läänemets  
Pikk 61  
150 65 Tallinn  
Estonia

Prague, 18 November 2024

Dear Minister,

A few years ago, unmanned systems were primarily talked about as the dreams of the future, but today, unmanned aviation is already proving in everyday military operations and civilian missions that it can protect human health, lives, time and money. In many cases, it is a gamechanger, providing a perfect way forward for the army, security and rescue forces to remain effective, modern, and operational.

The Czech company Primoco UAV SE is a leading European manufacturer of unmanned aerial vehicles (UAVs). In the category of medium-heavy aircraft with a take-off weight of 150 kg, endurance of 15 hours and a range of 1800 km, it is one of the world's elite. The One 150 UAV is the only UAV in the world certified to NATO STANAG 4703 and the company is the first operator globally to receive EASA LUC civil approval. The company is an approved military aerospace Development and Production Organization (DOA/POA) under the EMAR 21 standard. Primoco UAV is a publicly traded company on the Prague Stock Exchange.

To date, we have produced more than 200 One 150 UAVs, which are operating on four continents, including deployments in two contemporary wars. They operate as incredibly versatile and reliable aerial platforms with advanced sensors that are used for operations as varied as military reconnaissance and signal jamming to search, rescue and migrant control. A recent European government order for 24 UAVs to be deployed in sensitive military areas is an excellent confirmation of the reliability and practicality of our aircraft.

I believe that our One 150 UAVs can also bring significant value to your country. Due to the sensitive nature of its detailed capabilities and technical parameters, I would like to request a personal meeting.

Best regards,

**Ladislav Semetkovský**  
**Chief Executive Officer & Chairman of the Board of Directors**
